PROFILE

I am a passionate, self motivated Software Engineer, with extensive experience developing web applications using top-notch and modern front-end and back-end technologies.

I have a proven expertise, and yet not my area of expertise, for leading development teams in designing and implementing technical solutions that support critical business requirements.

WORK EXPERIENCE

Software Engineer (Remote)
Equinox
Aug 2019 - 2022

I'm part of a POD in charge of developing highly scalable, PROD ready solutions with high quality and fully tested code.

We're building a React app to be used by stakeholders and Equinox Media employees to simulate programs, workouts and more using AI behind the scenes to make recommendations, create programs and workouts for the clients.

I'm also in charge of Contentful data modeling, a content infrastructure headless CMS that will be used by multiple apps like mobile apps, microservices, our app and the AI microservice to consume a large set of data and resources to display content or use it for business logic.

This will give the possibility to content creators/trainers to use the platform to add content in a simple way for later use across multiple apps. Working alongside back-end team and data science team to build the best structure possible.

I've also been part of the creation and enhancement of their main Web page almost 100% Marketing driven thanks to NextJS + Contentful.

Tech Stack: React JS (Hooks + ES6), Next JS, Node JS + Express, MongoDB, Firebase, SQL, AWS, Material UI, Bulma, Bootstrap, Micro-Frontends

Software Engineer
Xside Solutions
Jan 2019 - Aug 2022

In most of the projects I've been part of small agile teams with, usually, a Scrum Master, a couple of Developers and one or two QAs.

The two biggest projects that I were part of were a NextJS + React Web App built for a Kavak-like business which consumed Marketing information through a Contentful integration which is a Headless CMS.

The other one was a React Native application designed as an in-house or built-in Twitter-like Social Network for the client allowing the users to interact among eachothers sharing business related information, congratulations, etc (every interaction a Twitter-like Social Network has such as posting messages, photos or videos, likes, dislikes, threads, etc)

Tech Stack: NextJS, React Hooks, Redux, React Context API, React-Query, React Native, Angular 6, NGXS/NGRX, NodeJS + Express, MongoDB, Firebase, SQL, AWS, Material UI, Tailwind, Bulma, Bootstrap.

Fullstack Engineer
Intive FDV
Jun 2018 - Jan 2019

I was part of a rather large tech team split into several smaller teams but we all worked on the same code base (a monolith at start).

Each one of the smaller teams was in charge of developing clean and fully tested production ready code for different sections within the main project.

The App was oriented to US lawyers, It provided access and reading and editing capabilities over different kind of public documents provided by the US Government.

Each different kind of document was accessed and stored in each of this different smaller modules in which, each, had different text analysis built-in tools.

- Agile Methodologies (SCRUM)
- Code Versioning (Git, GitHub, Bit-bucket, Lerna)
- AWS (Cloudfront, Lambdas)
- CI/CD (Jenkins)
- **Tech Stack:** NextJS (React), Express, Redis, Micro Services, Bootstrap, Jest, Auth0, Solr, MongoDB.

MY TECH SKILLS

Skill	Skill	Skill
React	Express	HTML & CSS
NextJS	Git	Redis
NodeJS	MongoDB	Auth0
Typescript		
Angular		

MY SOFT SKILLS

Comunication

Resiliance

Planning

LANGUAGES

Spanish

English
